ABOUT US

OUR PHILOSOPHY

Humble in front of mountains, aware of its beauty and its dangers, we are among those who focus our attention on preserving it rather than conquering it.

OUR REASON OF BEING

We are passionate mountaineers, climbers and skiers. We love the transparency of the ice, the purity of the rock and the silent peaks.

We are humble in front of mountains, and take a fresh look at them, closer to the material and to those who focus their attention on preserving it rather than conquering it.

We are aware of its beauty and its dangers.

We believe the fun is in the accomplishment. It is from below, where we work, at the foot of Mont Blanc and the Rockies, that we scan the peaks that inspire us to design the best products on the market.

We aspire to become the benchmark brand for mountaineering by offering the products our community is looking for.

We are a brand that cares about the environment, its customers, and the details of its products.

We are bold, creative and responsible.

We get to the point with a subtle blend of purism and daring.

OUR CORPORATE & SOCIAL RESPONSIBILITY

At BLUE ICE, we see ourselves as part of a global community and ecosystem.

We have a responsibility to ourselves, our customers and our business partners to constantly improve our environmental and social impact. We believe it is both a moral and a business imperative that the highest priority of our business is to return a positive long-term value to our stakeholders and the planet.

As such, we are committed to the following actions:

FACILITY & ORGANIZATION

- Passive conception of our head office
- 100% renewable energy supply
- Recycling/reusing of office waste
- Carpooling and bicycle commuting
- Composting all our organic waste
- Using biodegradable cleaning products

PRODUCT & SUPPLY CHAIN

- Locally-sourced raw materials when available
- Local production when possible
- Recycled/upcycled/reused raw materials
- Partnering with responsible vendors
- Long-lifecycle product design
- Resource-efficient shipping and receiving methods

ADVOCACY & PARTNERSHIPS

- Contributing business member of 1% for the Planet
- Contributions and sponsorships of local and regional access and advocacy groups
- Partnering with retailers and organizations with similar ethos
- Partnering with mountain associations and mountain guiding companies with similar values

CRAMPONS

HARFANG ALPINE

NEW

The most compact technical 12 point crampon ever made, for technical alpine climbing and mountaineering.

Materials: UHMWPE and HTPE
40mm center strap, chromoly steel

The Harfang Alpine is the ideal 12 point crampon when heading into terrain with any variation of ice or rock.

This crampon has a chromoly steel front and rear rail. Both rails are equipped with an anti-balling system. The front rail is asymmetrical to give you maximum performance. True to the Harfang line, the Alpine uses our central main textile strap that connects the front and back rails. The main strap flexible linking system minimizes bulk and offers an incredibly compact option. The Harfang Alpine is designed to fit any boot with a heel welt and includes two front bail systems: fully auto and semi-auto which are easily interchangeable.

STYLE: 100349

COMES WITH AUTOMATIC TOE BAIL AND SEMI-AUTO TOE BASKET

3 SETS OF HOLES FOR A WIDE RANGE OF BAIL ADJUSTMENT

HEEL LEVER WITH MICRO ADJUSTMENT

HARFANG

The most compact and adaptable crampon ever made for ski touring and ski mountaineering.

Materials: UHMWPE and HTPE
40mm center strap, Chromoly steel,
Aluminum

Certification: CE EN 893, UIAA 153

The Harfang crampons have a chromoly steel front rail and aluminum secondary and rear rail, offering an excellent balance between performance, technicality weight, and traction on ice.

This patented concept is based on a central main textile strap that connects the front and back rail and allows positioning of the central rail in the most suitable position based on the application or the geometry of the boots. The main strap flexible linking system minimizes bulk and offers a real compactness.

The Harfang is designed to fit any boot with a heel welt and includes two front bail systems: fully auto and semi-auto which are easily interchangeable.

HARFANG ENDURO

Our most durable; compact and adaptable crampon ever built for ski mountaineering and mountaineering.

Materials: UHMWPE and HTPE
40mm center strap, Chromoly steel
Certification: CE EN 893, UIAA 153

The Harfang Enduro crampons have a **chromoly steel front, secondary, and rear rail**. Giving you harmony between durability, packability, and weight. This patented concept is based on a central main textile strap that connects the front, secondary, and back rails. This system allows the user to mount it in the most suitable position based on the application or the geometry of the boots. The main strap flexible linking system minimizes bulk and offers a real compactness. The Harfang Enduro is designed to fit any boot with a heel welt and includes front bail systems: fully auto and semi-auto which are easily interchangeable.

HARFANG TOUR

The superlight take on the most compact and adaptable crampon ever built for race, ski touring, and ski mountaineering.

Materials: UHMWPE and HTPE
40mm center strap, Aluminum
Certification: CE EN 893, UIAA 153

The Harfang Tour crampon has an aluminum front, secondary, and rear rail. This is the go to crampon when fast and light are the best choice. The middle rail can be fully removed to give you an even lighter setup for racing. This patented concept is based on a central main textile strap that connects the front and back rail and allow to mount it in the most suitable position base on the application or the geometry of the boots. The main strap flexible linking system minimizes bulk and offers a real compactness.

The Harfang Tour is designed to fit any boot with a heel welt and includes two front bail systems: fully auto and semi-auto which are easily interchangeable.

ICE SCREWS

AERO

The lightest weight steel ice screw on the market with an innovative 3-tooth tip design and largest diameter, ideal for ice climbing and technical mountaineering.

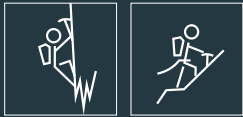

Materials: Chromoly Steel, Aluminum
Certification: CE EN 568, UIAA 151

The Aero is innovative thanks to its 3-tooth tip design which allows for easy placement in all conditions. Its thin wall design reduces the weight considerably, the steel tip and tube maintains high durability of the threads. Its largest diameter body allows to use securely existing holes when there is no other option.

Color-coding easily indicates the length of the screw.

Its features and design make it the ideal ice screw for the most technical routes where performance, durability, and lightness are the key.

AERO LITE

The lightest weight aluminum ice screw on the market with an innovative 3-tooth tip design and largest diameter, ideal for technical mountaineering.

Materials: Aluminum, Stainless steel
Certification: CE EN 568, UIAA 151

The Aero lite uses a stainless steel, 3 tooth tip which allows for easy placement in all conditions. The aluminum body and hanger minimize weight, while the large outer diameter allows for secure placements when using existing holes.

Color-coding easily indicates the length of the screw.

Its features and design make it the ideal ice screw for the most technical routes where lightness and performance are the key.

ICE AXES

AKILA

Lightweight, functional, and durable technical piolet for alpinists or steep skiing enthusiasts.

Materials: Chromoly Steel, Stainless Steel, Aluminium, Impact-modified Nylon
Certifications: CE/EN 13089, UIAA 152

The Akila is the first Type 1 ice axe to achieve such high level of technicality in the ultralight category. The shape of its chromoly steel ergonomic head is studied for optimal anchoring regardless of the surface. The Akila is quite short, ultralight and compact to be easily stored inside a backpack. It is the ideal tool for hard use and is offered in both a hammer and adze. Protectors and Tech Pommel included.

HUMMING BIRD

Ultralight and technical ice axe for high-alpine skiing, officially approved for ski mountaineering competitions.

Materials: Titanium, aluminum, impact-modified nylon

Certification: Certifications: CE/EN 13089, UIAA

The Hummingbird is one of the lightest, fastest, toughest ski mountaineering piolets on the market. Its titanium head is as light as aluminum but as solid as steel. Its aluminum shaft promises extreme lightness and solidity. Pick and adze protector included.

STYLE: 100116

FALK

Light and compact for ski touring and ski mountaineering.

Materials: Chromoly Steel, Aluminum, Impact-modified Nylon
Certification: CE/EN 13089, UIAA

The Falk is a great entry-level ice axe for ski mountaineers or classic touring skiers. Built with the same characteristics as our Hummingbird, the Falk offers a very good price / performance ratio. Its head is designed in chromoly steel which guarantees it an effective anchoring and its aluminum handle ensures lightness and strength. It is the ideal tool for novice skiers and mountaineers looking for a technical and lightweight ice axe.

Pick and adze protector included.

BLUEBIRD

Classic, resistant and all-purpose mountaineering ice axe with very good anchoring qualities.

Materials: Stainless steel, aluminum, impact-modified nylon

Certifications: CE/EN 13089, UIAA

The Bluebird ice axe is the most versatile and robust in our range, designed for steep snow or ice slopes. With its 356g, it offers very good anchoring qualities for classic mountaineering. The tip and head of the axe are made of hot-forged stainless steel material that offers ultra high durability and corrosion resistance even with the most intense use.

Pommel and protectors included.

BLACKBIRD

Classic, all-purpose ice axe for general mountaineering and glacier travel.

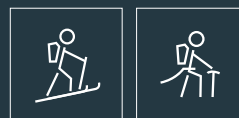

Materials: Chromoly steel, aluminum, impact-modified nylon
Certifications: CE/EN 13089, UIAA

The Blackbird is a classic and versatile mountaineering ice axe: its head is designed with Chromoly steel, both light and rigid, for effective anchoring.

Built with the same philosophy as the Bluebird, this ice tool is an excellent introductory tool for mountaineers and alpinists.

Pick and adze protector included.

HARNESSES

NEW

CUESTA ADJ

The full adjustable version of the Cuesta harness making it the perfect all-around 4 season harness when layering is needed.

Materials: High tenacity PES structural webbing, UHMWPE magic ring, Polyester fabrics, High density EVA foams, Aircraft grade Aluminum (speed buckle), Acetal (plastic buckles)

Certifications: CE EN 12277, UIAA 105

It is a multipurpose harness dedicated to confirmed and committed climbers.

The sleek, slim design with laminated waist belt offers complete freedom of movement with a minimal weight.

Its hot-forged speed buckle adjustment system allows rapid adaptation depending on your anatomy or the chosen activity.

Four ice clipper loops allow multiple icescrew racking options and make this harness compatible for the most challenging ice lines.

W'S CUESTA

The feminine version of our all-around 3 season rock-climbing harness, ideal for trad climbing, sport climbing or long multi-pitch routes.

Materials: High tenacity PES, UHMW polyethylene, aircraft grade aluminum speed buckle, acetal buckles

Certifications: CE EN 12277, UIAA 105

The W's Cuesta has been specifically designed to meet women's fit requirements. It is a multipurpose rock-climbing harness dedicated to confirmed and committed climbers.

The sleek, slim design with laminated waist belt and elasticized leg loops offers complete freedom of movement with a minimal weight (285g). The lightweight webbing and the tie-in points made out of high tenacity nylon improves resistance and durability of the harness. It has four gear loops: 2 front, with rigid insert for ease of clipping and 2 back, souple for backpack compatibility. It is the harness to carry everywhere you go.

BACKPACKS

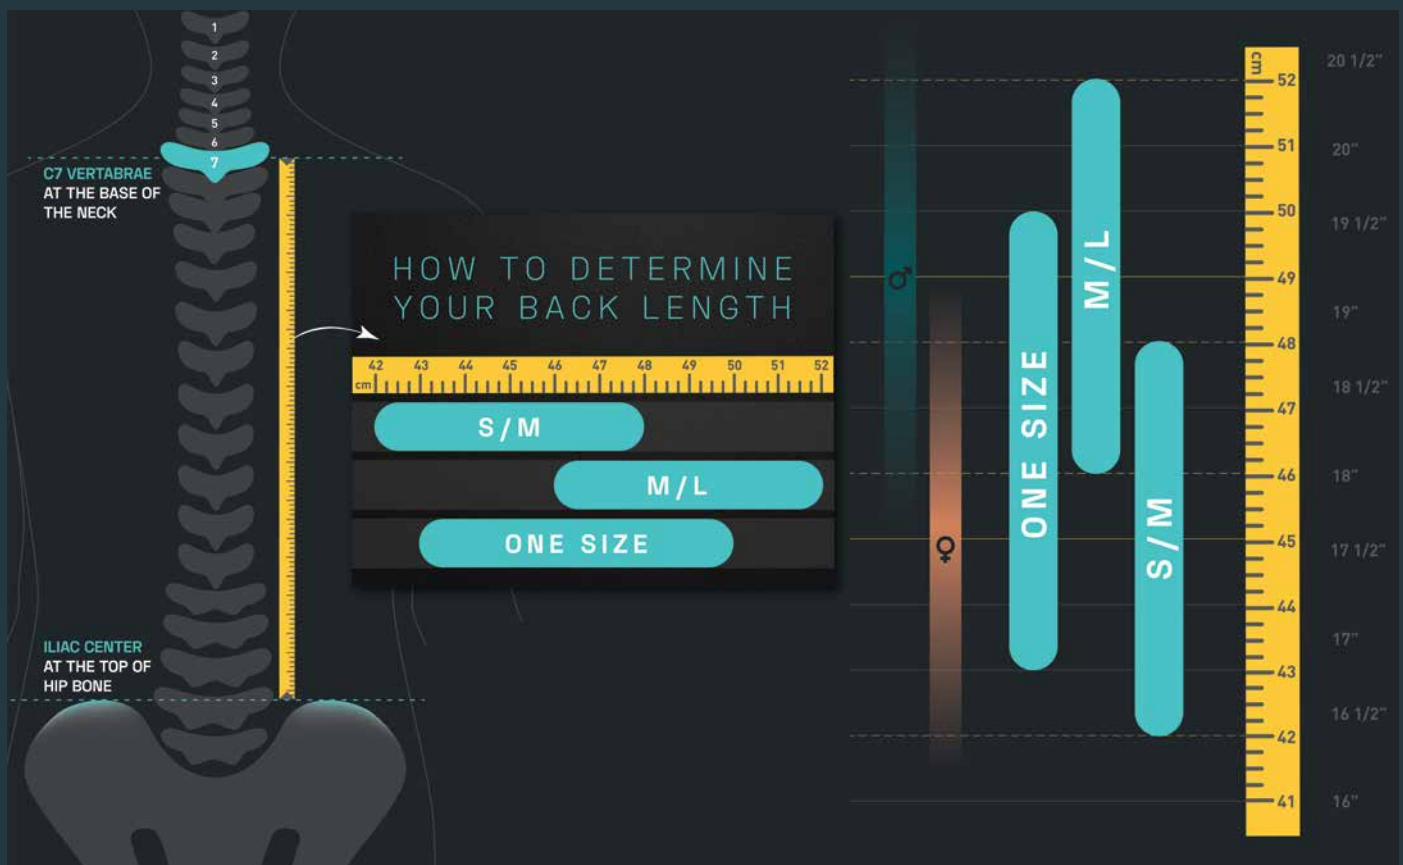

BACKPACK FITTING CHART

**Fit is critical aspect of pack performance and is a complicated equation
- there are many factors that impact how well a pack will fit.**

Our new packs are engineered to fit as wide a range of body shapes as possible, based on data and validated through fit testing to offer the maximum number of users a high performance fit.

As it is the simplest and most repeatable measurement, we describe our fits based on back length, but this is only one factor.

WARTHOG 30 & 40L

NEW

The warthog has been updated this season to be lighter and more minimalist. It is a bold and uncompromising pack for the most serious and committing alpine objectives.

Materials: 210d Robic Nylon ripstop main body fabric - PFC free, Bluesign approved material. Permanent, fluorocarbon-free weather shedding face coating.

Built around a full spec alpine feature set, the Warthog is a versatile pack that can be stripped down, making it up to 100g lighter.

Built on our new pack fit platform and offered in two sizes, the fit and carry of the Warthog set it apart. Our innovative hybrid laminated shoulder straps is inspired by climbing harness construction to produce a carry system which is super low profile but offers high load distribution and comfort.

Carbonate coated fabrics shed off snow and ice and make this bag ever more robust for intensive use in winter conditions.

Helmet holder compatible.

Offered in two fits S/M and M/L

DRAGONFLY 18 & 26L

NEW

A minimalist and ultralight alpine pack for fast and light missions.

Materials: 210d High Tenacity Nylon ripstop main fabric - PFC free, Bluesign approved material.

The Dragonfly packs have been redesigned this season with a high power-to-weight ratio while being extremely comfortable to carry. Pockets are optimized for stretch and position to keep essentials accessible. Built with a new fit standard, we use a mesh based carry system with ultra-static mesh to provide breathability. The engineered foam shoulder transfers loads without deforming.

Fabrics are weather shedding and combined with water resistant YKK zips.

Hydration and helmet carrier compatible.

CHIRU 25 & 32L

NEW

Ultra-functional and light, it's the ideal pack for classic mountaineering.

Materials: 210d High Tenacity Nylon ripstop main fabric - PFC free, Bluesign approved material.

The feature set is based around the needs of mountain professionals, who value the ability to organize and have a quickly access to the gear.

The full-length zip access (32L only) makes this pack extremely practical. A beefy back panel and carry system take care of load management, and the low profile hybrid shoulder straps and stashable waist belt will not interfere with ropework or harnesses. The 3D patterned pick tunnel creates a snug pocket around axe heads for a super stable axe carry. Weather resistant YKK zips and CO DWR treated fabrics offer durability and water protection.

Hydration compatible and helmet carrier included.

Offered in two fits S/M and M/L

ROC

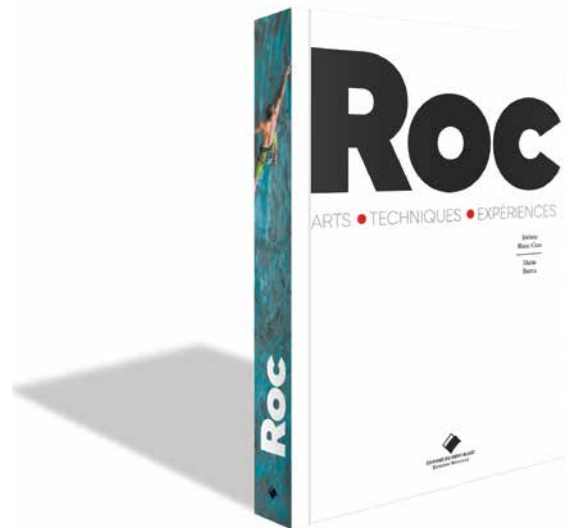

Reference book on the practice of rock climbing by Jérôme Blanc-Gras and Manu Ibarra, Blue Ice technical advisers.

ROC, Éditions du Mont-Blanc

STYLE: 100321

FRENCH

ROC tackles all forms of rock climbing away from sanitized terrain, from large alpine routes to modern “trad” lines while covering history, playgrounds, equipment and techniques.

A book to acquire in-depth knowledge of culture, approach and safety. ROC is for all fans of verticality and adventure, both amateurs and professionals, occasional practitioners or instructors.

ICE BOOK

Required reading for all ice climbers and alpinists.

Soft cover with flaps
264 color pages

STYLE: B002

995 G

210 X 265 MM

FRENCH

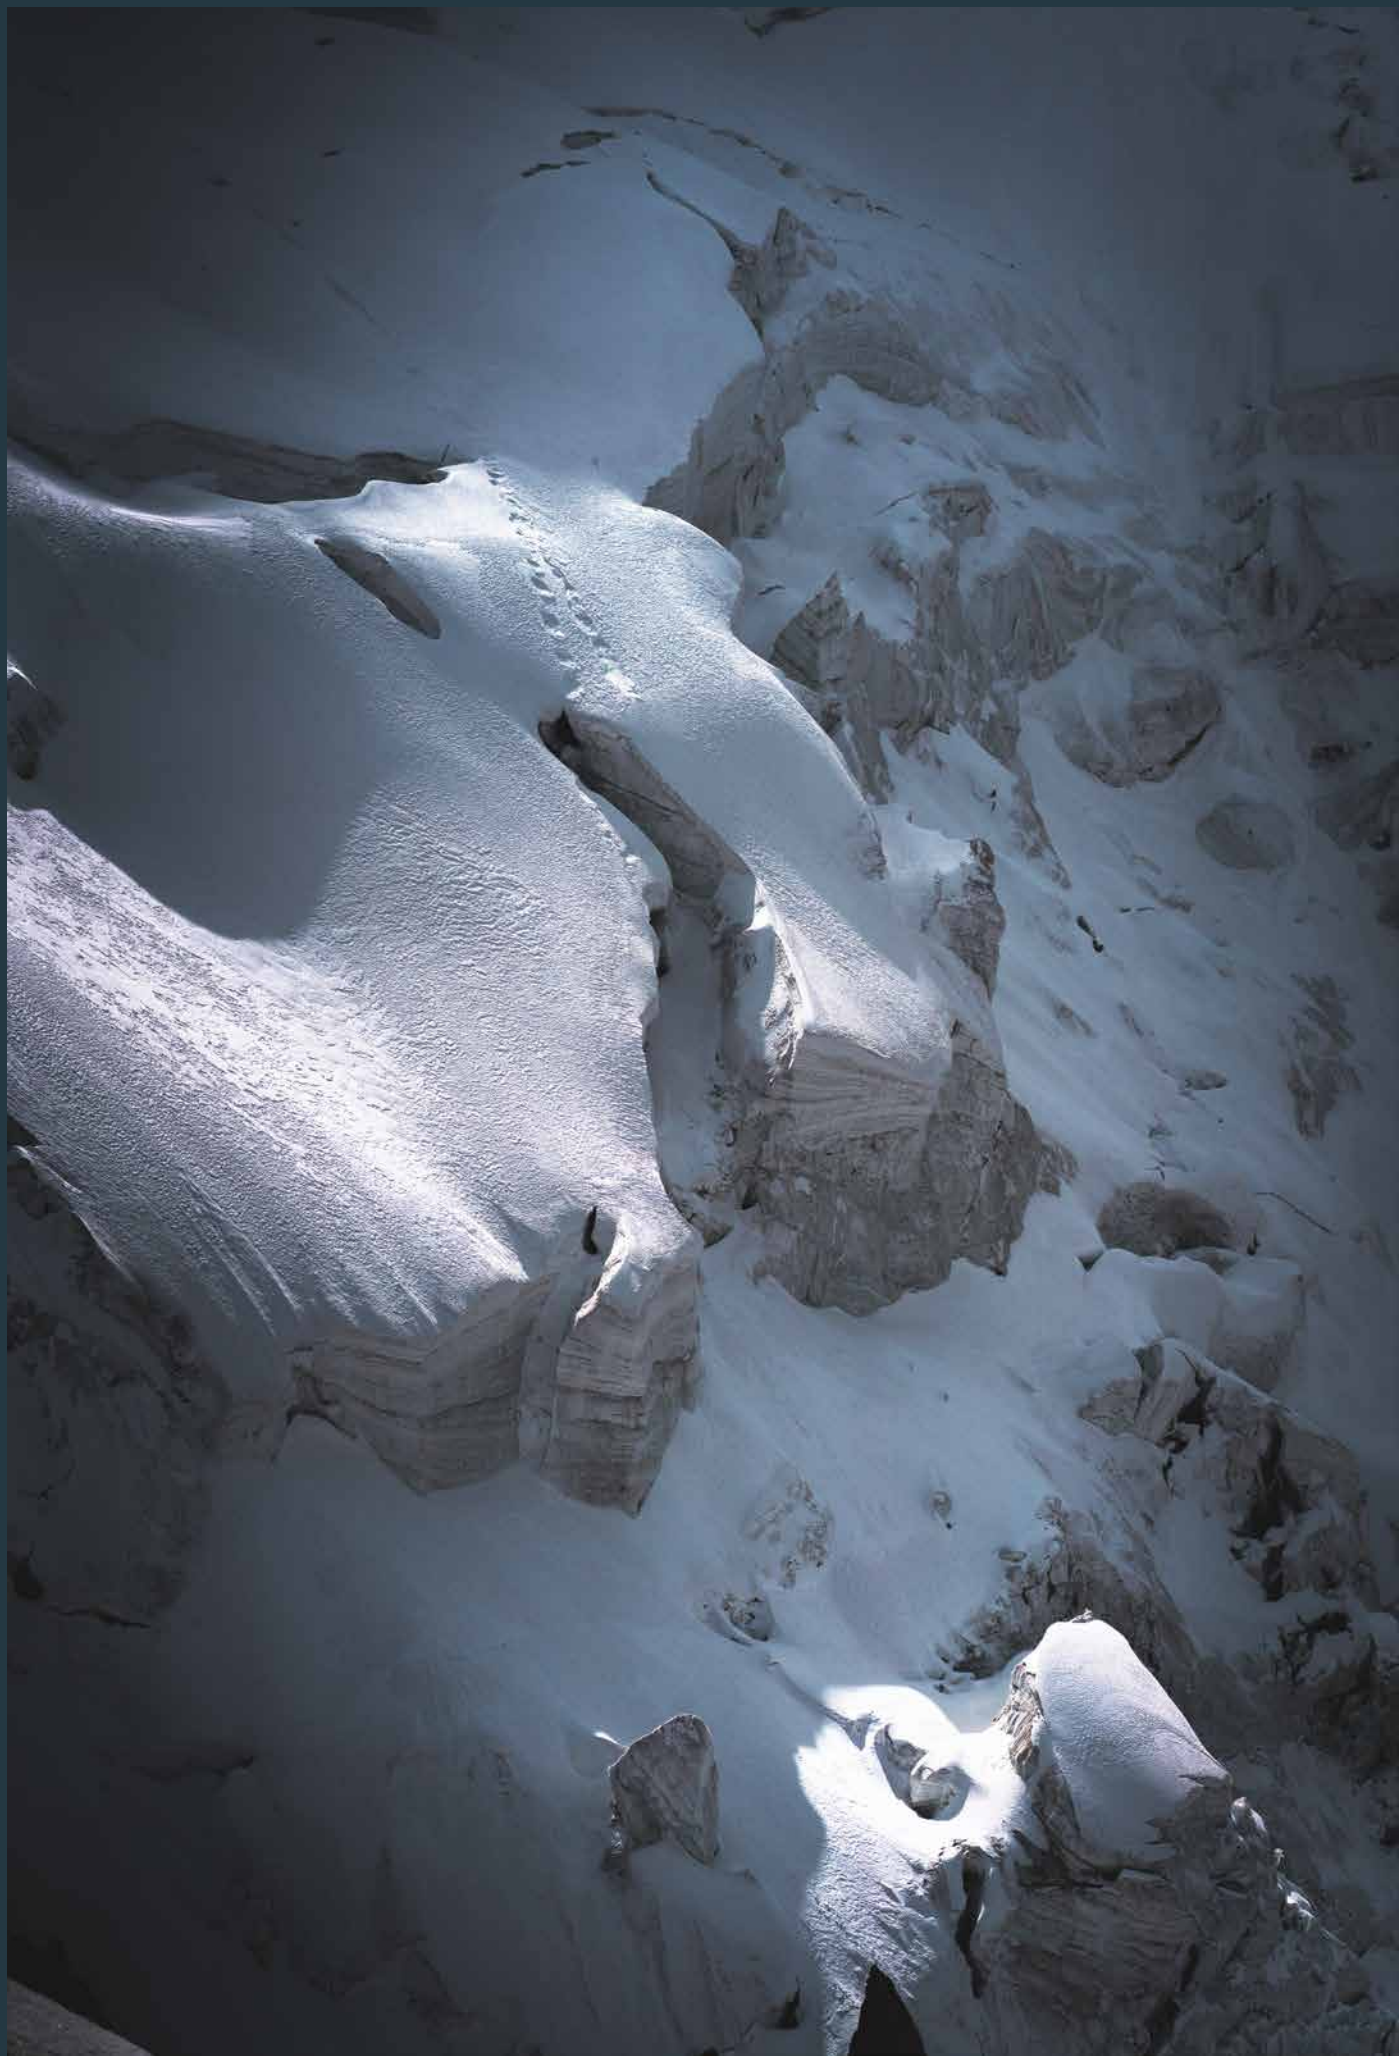

ENGLISH
(only available in North America)

Everyone who has ever swung an ice tool, or wanted to learn, has something to gain from this excellent book.

Much more than your basic instructional manual, it presents an in-depth look at the sport of ice climbing, from the earliest alpine ascents to modern drytooling. There is a wealth of information on climbing techniques, equipment, history, and even the science of ice itself. All ice climbers should pay close attention to the authors' innovative “Check and Go” risk reduction method, and

their detailed analysis of the different types of ice formations. Numerous photos, charts, and diagrams illustrate the text, and there are personal accounts written by top ice climbers and alpinists. Suitable for ice climbers of all abilities, as well as guides, instructors, and alpine clubs. Foreword of the English version by Jeff Lowe.

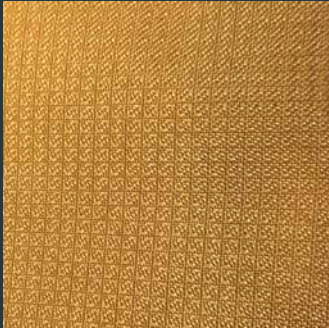

TIAN SHAN © AARON ROLPH

TECHNOLOGIES

To produce the best gear possible, we only use the most durable fabrics and finest technologies, with the highest quality standards, including the following:

FABRICS

ROBIC

Hollow core Nylon 6 yarns give great strength to weight ratios and weave into tough, supple fabrics that outperform their weights.

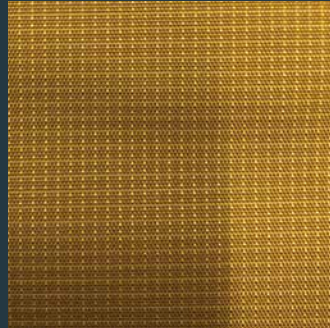

Fabrics: Robic 100, Robic 210

ROBIC AIR

Nylon 6 yarns which combine hollow core technology and air texturing to allow very high abrasion resistance to be achieved in very light textiles.

Fabrics: Robic 420

N6.6

High tenacity Nylon yarns are some of the toughest conventional bres, abrasion and tear resistance is very high.

Fabrics: 210HT, 400HT

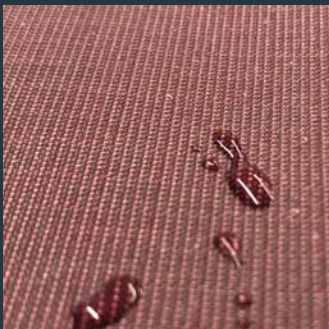

UHMWPE

Stronger per gram than steel and with high resistance to UV and abrasion, these yarns are among the highest performing bers available.

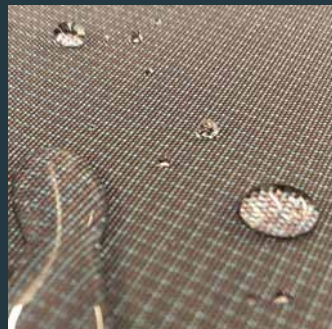

Fabrics: Spectra 70, Alpine Harness webbing, Crampon Straps

FINISHES

CARBONATE

An innovative face coating that offers increased abrasion performance and permanent PFC free weather shedding performance.

DWR CO

A Flouro-Carbon free surface treatment that provides weather shedding ability and stain resistance.

UTS PU

A specialized waterproof coating that minimizes the drop in tear strength normally seen when coating or laminating fabrics.

TPU LAMINATION

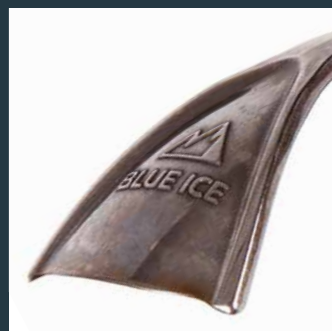

A specialist process that permanently bonds a sheet of thermoplastic to one or both sides of a fabric, it gives maximal toughness and very high levels of waterproofing, often over 10k mm.

METALS

7075-T6 ALUMINUM

Also called "aircraft grade" aluminum, often referred to as the strongest aluminum grade. Alloy 7075 has the strength of many steels, while retaining aluminum's lightweight qualities.

STAINLESS STEEL

Stainless steel's resistance to corrosion and staining, low maintenance, and familiar lustre make it an ideal material for many applications where both the strength of steel and corrosion resistance are required.

TITANIUM

Titanium combine qualities of both steel and aluminum : Resistant to corrosion, it is recognized for its high strength-to-weight ratio. As strong as steel, titanium is 60% denser than aluminium, but more than twice as strong.
